

Circular SAW Mountings ●

Features

The metal interleaf incorporated (17-1392) in the design provides a higher compression to shear stiffness ratio, thereby increasing the load capacity in the compression or combined compression and shear modes.

The 17-1780 engine mounting features a void in the rubber section to allow the use of a central snubber device.

Metalastik® type Circular SAW Mountings

Used in a variety of industrial applications including vibratory rollers and small screens or for the suspension of smaller type I.C. engines.

17-1780 can be fitted with a rebound washer for mobile applications.
